EDUCATION

2024 – 2027 - Doctor of Philosophy (PhD) in Mathematics and Computer Science.
Institut Polytechnique de Paris, Palaiseau, France.

- Specialization: Computer Science, Data, Artificial Intelligence (AI).
- Research Subject: Real-time scheduling for 5G NR SCADA systems.
- Relevant Modules: *Reliability and Security of Integrated Circuits, Hacking Techniques, Creative Commons licenses, Presenting to non-scientific audiences, ORCID IDs.*

2022 – 2024 - Master of Science (MSc) in Engineering.
Télécom Paris, Institut Polytechnique de Paris, Palaiseau, France. *Double degree program.*

- M2: Embedded systems and information processing.
  - Grade: 4.0 GPA (4.0 scale).
  - Research Project: Modelling critical real-time execution for 5G base stations.
- M1: Embedded systems, mobile networks, and the Internet of Things.
  - Grade: 3.8 GPA (4.0 scale).
- Relevant Modules: *Reconfigurable architectures and HDL languages (FPGA, SystemVerilog, and VHDL), Rust, Concurrent programming, Microprocessor-based systems, IoT Protocols and Systems, Wireless IoT, Mobile networks and virtualization, Embedded Linux, Embedded Artificial Intelligence, Real-time Systems, Language Processing, System Modeling.*

2017 – 2024 - Bachelor of Science (BSc) in Engineering.
Federal University of Espírito Santo, Vitória, Brazil. *Double degree program.*

- Grade: 3.7 GPA (4.0 scale).
- Electrical Engineering with emphasis on Electronics, control and automation systems, telecommunications, and computer science.
- Final Project: Multiplatform System For Data Reception Via Visible Light Communication Technology.
- Relevant Modules: *Embedded Systems, Computer Architecture, Digital Systems, Computer Networks, Telecommunications Systems, Dynamical Systems, Mobile Robotics, Computer Vision, Oriented IoT Project.*

PROFESSIONAL EXPERIENCE

2024 – 2027 - NAI Project (PEPR 5G) Researcher.
Télécom Paris, Palaiseau, France.

- Research on the real-time aspects of URLLC in 5G, mainly the application of critical systems task scheduling algorithms.
- Teaching activities on Embedded Systems and Mobile Networks.

2024 - Embedded Systems and IoT Intern.
Orange S.A., Meylan, France.

- Remote access application for Matter IoT devices.
  - Discovering the Matter and USP protocols
  - Implementation of a tool for transforming a Matter data model into the USP data model
  - Embedded software for an IoT gateway based on ARM Cortex-A processor.
  - Prototype showing the capabilities of a Matter device using the USP protocol
- Developed the first version of the USP data model capable of interacting with the Matter protocol. Achieving an A+ in my master's thesis.

2023 - Network and Automation Intern.
Synchrotron SOLEIL, Saint-Aubin, France.

- Software tool parameterization dedicated to centralized supervision of Siemens PLCs (S7-3xx and S7-15xx).
- Over 98 % of the targeted devices were covered through a solution based on the S7 and SNMP protocols.
    - Real-time monitoring tool: Zabbix;
    - Programming languages: Python, C/C++, and CMake.

2021 – 2022 - Embedded Systems and IoT R&D Intern.
2Solve Engineering and Technology, Vitória, Brazil.

- Development of software for embedded systems, IoT Web Applications, and technical documentation.
    - Embedded systems based on Raspberry Pi and SAMD21.
    - Programming languages: Javascript, Python, C/C++, and CMake.
    - Dev tools: NodeJS, AngularJS, InfluxDB, and MongoDB.
    - IoT tools: Node-RED and Grafana.
- Research project: Design of an OOK transmitter for short-link visible light data communication.

2019 – 2021 - Undergraduate Student Researcher.
UFES Telecommunications Laboratory (LabTel), Vitória, Brazil.

- Software and hardware design for visible light communication systems (VLC systems).
    - Dev tools: Android Studio, NodeJS, VueJS.
    - Programming languages: MatLab, Java, Python, and C++.
- Research projects:
    - Application of Visible Light Communication Technology in Monitoring High-Risk Newborns;
    - SmaL: Smartphone Receiver for Coded Data via Light.
    - Publications: [1], and [2].

2019 – 2020 - Automation Developer.
Cassiano Antonio Moraes University Hospital (HUCAM), Vitória, Brazil.

- Establishment of electronics for a supervisory system, data monitoring app, and creating technical documentation.
    - Embedded systems based on Raspberry Pi, Arduino, and ESP8266.
    - Real-time monitoring tool: Zabbix.
    - Programming languages: Python, Javascript, and C++.
    - Publications: [4]

2019 - Educational Program Fellow.
Tutorial Teaching Program (PET), Vitória, Brazil.

- Group of distinguished students from the Electrical Engineering department at UFES. Software training, such as LaTex. Research about embedded systems. Production of scientific articles.
    - Embedded systems based on Raspberry Pi and Arduino;
    - Programming languages: MatLab, Python, and C/C++.
    - Publications: [3]

VOLUNTEERING

2018 – 2019 - Activity Manager.
Academic Center of UFES Electrical Engineering, Vitória, Brazil.

- Organization of welcome events for freshmen, organization of lectures on subjects of interest to graduation, promotion of sports events, selling of electrical engineering custom t-shirts, and maintenance of the study room.

2018 - Museum Mediator.
UFES Museum of Life Sciences, Vitória, Brazil.
- Introduce the museum to visitors, control the flow of people, and pass safety guidelines.

HONOURS AND AWARDS

2022 – 2024 - BRAFITEC scholarship.
CAPES Foundation, Brazil.
- Master's degree funding granted based on criteria of academic and technical excellence.

2016 - Honorable Mention Brazilian Public School Mathematics Olympiad.
Institute of Pure and Applied Mathematics (IMPA), Rio de Janeiro, Brazil.
- Stood out in mathematics at this Olympiad, being the only high school student out of around 500 in the school to receive this award.

2015 – 2016 - Outstanding certificate at the São João Batista School Science Fair.
EEEFM São João Batista (High School), Cariacica, Brazil.
- 2016 (1st place) - Physics project involving basic concepts of electromagnetism to turn on lamps wirelessly.
- 2015 (2nd place) - Tesla coil capable of creating electric arcs of a few centimeters.

LANGUAGE SKILLS

- Portuguese - Native Language.
- English - Advanced (C1, 2024).
    - Cambridge Linguaskill B2 (178 out of 180), 2022.
- French - Advanced (C1, 2024).
    - Test de Connaissance du Français B2 (488 out of 699), 2021.
- Spanish - Intermediate (B1, 2024).
- Galician - Elementary (A2, 2024).
- Italian - Beginner (A1, 2024).

PUBLICATIONS AND APPEARANCES

1. ZWAAG, K., ROCHA, H., SEGATTO, M., BASTOS, T., SILVA, J., SANTOS, F., **SANTOS, A.** et al., 2021. **Performance Evaluation of an OOK-Based Visible Light Communication System for Transmission of Patient Monitoring Data**. IFMBE Proceedings.

2. **SANTOS, A.**, ROCHA, H., SEGATTO, M., BASTOS, T., SILVA, J., ZWAAG, K. et al., 2020. **Application of Visible Light Communication Technology for Monitoring in Hospitals**. Brazilian Congress on Biomedical Engineering.

3. **SANTOS, A.**, JURESWKI, A., MENDONÇA, M., ULHOA, P., 2020. **History of PET Electrical Engineering UFES**. Brazilian Congress of Engineering Education.

4. **SANTOS, A.**, JUNIOR, L., JARDIM, I., 2020. **Low-Cost Module for Supervisory System of Hospital Substations**. In: Congresso Internacional Online das Engenharias.
